APPENDIX A:

The Inventory

Prepared by Archeological Services, Atlanta National Park Service United States Department of the Interior

Funded by the Savannah District U. S. Army Corps of Engineers

1983

4

_

The following Office of Archeology and Historic Preservation (OAHP) inventory forms were prepared for those extant structures more than 50 years of age located within the boundaries of the Richard B. Russell Multiple Resource Area (MRA) and are presented here as an appendix to the report outlining that resource (ALL THAT REMAINS: The Traditional Architecture and Historic Engineering Structures of the Richard B. Russell Multiple Resource Area, Georgia and South Carolina, Worthy 1983). The MRA includes those portions of Elbert and Hart counties, Georgia, and Abbeville and Anderson counties South Carolina, adjacent to the Savannah River and between Clarks Hill Reservoir and Hartwell Dam.

The criteria for selection of structures within these boundaries to be included in the inventory followed the standard procedures for selection for the National Register of Historic Places and the National Park Service. These standards specify that buildings less than 50 years of age as a rule are not recorded, and that all complexes containing at least one structure within the minimum age criterion are inventoried as a whole. Exceptions may be made, however, if specific significant conditions occur. Exceptions in this instance were made when structures within the complexes were too deteriorated or overgrown with weeds to merit inclusion. Additionally, some significant structures were included in the inventory, although the actual acquisition lines had not been drawn or were unknown. In these cases, an arbitrary distance of 1000 ft was marked off on USGS topographic maps from the average lake level (480 MSL gradient), and the area surveyed for structures. In a few cases, particularly significant structures were included in the inventory

because of the physical and visual impact of Russell Lake, even though the buildings lie outside the acquisition area. Special note was also taken of structures of architectural or historical significance that were severely deteriorated and would not survive to be noted by future surveys.

The field survey was carried out between January 23, 1979 and May 1, 1979, by John Linn Hopkins and Emily J. Harris, with the result that 93 domestic structures and 8 engineering elements were inventoried. Subsequently, recommendations were made regarding the eligibility of each property to be listed in the National Register of Historic Places.

The OAHP forms are presented here in numerical order relative to the inventory identification number. This number consists of a two-letter county abbreviation followed by the Real Estate Tract Number employed by the U.S. Army Corps of Engineers. In cases where more than one complex existed within a tract, a further identifying number was assigned. Individual buildings within each complex were designated by a letter. Structures within a given complex that were extremely deteriorated were located on the sketch-site plans to provide a complete understanding of the complex, but were not further recorded. The forms are presented here in their original form.

As a means of cross-reference, Table 1 indicates the sites by OAHP identification number, HABS/HAER recording number (when applicable), and the site numbers applied by IAS-Atlanta to facilitate incorporation into the RBR computerized data bank.

Significance

This structure was typical of the small farm houses found throughout the project area and the Southeastern United States. This structure is now in the process of demolition for salvage, and most significant fabric has already been removed. Two remaining outbuildings on the site are suffering similar fates.

NEW PROPERTY AND P

i

Significance
This superior home is certainly the most impressive structure in the project area, and is among the few such grand
plantation houses remaining in Elbert County. Although not directly impacted by the construction and flooding of
the Russell Dam, this house site (already listed on the National Register of Historic Places) will be surrounded
on three sides by the waters of the proposed lake, which will reach to within 300 feet of the house. This structure
has been included in this inventory because of the overwhelming visual impact of the proposed lake upon the site.

Significance

This well house is a unique structure within the project area, although the singular nature of this structure derives completely from the addition of the storage room at rear. See EB500-A for general comments.

Significance A regionally significant 19th century water power site that, though it is in ruins, is likely to yield important information relating to both the history of grist milling in the area and the development of the lare 19th century Southern textile industry. This is a worthy site which retains much of its integrity and can be a source of important archaeological data.

Significance

This is a typical example of a late nineteenth century barn found throughout the project area and the Southeastern United States. It is the only surviving structure from a small farm complex, once located on the same site.

11. (continued) to the site.

.

This site is an extremely important building for the project area, as it is one of few Antebellum homes still in existance. The architectural quality of the building, though deteriorated through vandalism and neglect, is easily detectable and would be as easily restored. Historically, this house is as important as its architectural significance. It is believed that this home was the plantation house for the Grogan estate. At one time, the "Eureka" Mill was included in this property on the Beaverdam Creek, which was one of the early water-powered

industrial sites in this area. The use of quarried granite in the construction of the piers and chimneys of this action of the piers and chimneys of the piers a

17. (continued) wing, and formal landscape composition of site.

Significance This structure is typical of small tenant dwellings found throughout the project area and the southeastern United States. It is adjacent to a similar tenant house (510 B). Though somewhat deteriorated, this structure contains much of its original fabric and integrity, and could be easily preserved.

Significance

This structure is typical of small tenant dwellings found throughout the project area and the southeastern United States. It is adjacent to a similar tenant house (510 A). Though much of the original interior fabric remains intact, some structural deterioration has taken place.

Partie Pr

This structure is a typical farmhouse seen throughout the project area and the southeastern United States. Though much of the original fabric remains intact, this structure is slowly deteriorating through vandalism and neglect. Much of this deterioration is taking place in the interior from water damage, and some structural fabric has been greatly affected.

Significance

This structure is an interesting example of a small tenant dwelling, similar to other structures found throughout the southeastern United States. The unusual characteristic of the low hip roof makes this structure unique in the project area, though somewhat less unique in the surrounding regions. This structure has been badly damaged due to vandalism and neglect and is deteriorating rapidly, thereby compromising any preservation effort.

(j) Two-story, balloon frame storage barn, gable roof covered with wooden shingles, boxed eaves; clapboard siding; foundations of fieldstone granite piers, CA. 1935. This complex is intact and relatively well preserved.

Significance

Although this 1930's farm complex is ineligible for inventory by usual H.A.B.S. standards, it has been included in this survey as an excellent example of an intact and well-preserved early twentieth century agrarian complex. The similarity of many of these structures to earlier structures in the inventory indicates the continuity of building types and farming needs in this region. See also Site EB731-1B.

ر

significance According to informant evidence, the log portion of this structure was originally a kitchen for the nearby Harper plantation, an early nineteenth century complex. The sturcture was moved to its present location and adapted for use as a barn CA. 1935 by Reuben J. Anderson. The structure illustrates the common practice in this area of adapting farm buildings to changing needs. The log portion of this structure is a fine example of one-half dovetail joinery. This structure is the only example of log construction on the Georgia side of the project area.

Significance

This early twentieth century farm complex is typical of such complexes throughout the project area and the Southeastern United States. However, such a well-preserved complex is rather unusual. The complex is associated with Site EB731-1 through single-family ownership.

11. (continued) section with Elbert County Road 239, then southeast on Co. 239 0.1 mile to an unpaved private road, then south on the unpaved private road 0.1 mile to the site.

17. (continued) documented due to lack of time remaining in the inventory.

1

significance This small dwelling is an example of a typical post-Civil War farmhouse, found throughout the project area and the southeastern United States. This structure is in a good state of repair, and appears to contain much of its original fabric.

Significance This small barn is typical of the outbuildings found on small farmsteads in the project area and the southeastern United States. The structure appears to be of an earlier construction date than the other buildings on the site, which may indicate its survival from an earlier farm on this site, or its removal from another location.

Significance
This dwelling is typical of small post-Civil Ware farm houses located throughout the project area and the Southeastern
United States. The adaptation of the structure from house to barn exemplifies the way in which farm structures in
this area are altered to meet changing needs. The associated barns, which have undergone similar alterations, are
contemporary to this house, and formed a typical small farm complex for the region.

This barn is an unusual example of construction within the project area and in the surrounding regions. The use of saddle-notched logs to form a crib within the structure for the purpose of hay or corn storage appears to be quite singular. Despite additions to the original structure, most of the original fabric remains intact.

Significance
This large dwelling is the only extant example of the early plantation/farm houses in the project area. Constructed CA. 1810-1820, this house was properly recognized as significant by the National Register of Historic Places in 1976. The original fabric of this home seems to be in a good state of preservation and should be quite easily restored.

11. (continued) 238, then east and south 1.4 miles on Co. 238 to the site.

Significance According to informant evidence this barn was moved from an early local mill site to its present location, CA 1910. The site and construction of the barn indicates that the original barn, CA. 1840, was radically altered through the relocation process, in effect building a new barn from old parts.

25 PHOTOS AND SKETCH MAP OF LOCATION

Significance This small house is an example of a typical dwelling for a late-nineteenth century farm, seen throughout the project area and the southeastern United States. The current use of this structure as a storage building for farm products is resulting in the increasing deterioration of its original fabric. It is associated with three outbuildings, comprising a typical late-nineteenth century small farm complex.

Significance This is a typical example of well houses constructed in this area CA. 1850. It is one of the few surviving examples of structures from this period in the project area. The well house and cattle barn (Site EB1516-B) are the only remaining structures from what appears to have been a fairly large plantation/farm complex bordering the Savannah River.

Significance This barn is typical of outbuildings constructed 1850 in this area. It is one of the few surviving examples of outbuildings from this period in the project area. Despite additions to and deterioration of the original fabric, the integrity of the structure is intact. (See EB1516-A for significance of complex).

two radically different but well preserved periods of architectural construction. The core of this home was built CA. 1820, and contains a good deal of original fabric despite being greatly altered from its intended appearance. Additions to the house were undertaken CA. 1908, according to informant evidence, which included the partial removal of the second story of the original home. The fabric of the early twentieth century additions remains intact and in excellent repair.

11. (continued) 238, then east on Co. 238 0.2 miles to the intersection with unpaved Elbert County Road 305, then northeast on Elbert Co. 305 0.4 mile to the site.

This structure is a typical example of a tenant farmer or homestead dwelling of the late nineteenth and early twentieth century, and may be seen throughout the project area and the Southeastern United States. The significance of this structure as an example has been greatly lessened because of the extreme deterioration of the original fabric.

This site is a poorly preserved example of a small rural homestead dating from the period 1880-1890. The structure's significance has been undermined by the deterioration of its original fabric due to neglect, and is further diminished by the numerous examples of similar buildings throughout the project area and the Southeastern United States.

Significance
This barn is one of the comparatively few examples of traditional log construction surviving in Abbeville County.
The use of V-notch joinery indicates a later date than the earliest period of log construction in this area
(CA. 1800-1830). The structure exemplifies the survival of log construction during the nineteenth century and
the use of frame additions to adapt small log buildings to changing needs. The structure continues to deteriorate,
but the significant features of log construction remain intact.

Significance
This structure is an interesting example of a house for a small farm in the project area. Although the plan of this house is unique in the project area, similar structures may be seen throughout the southeastern United States.

significance This structure was recorded due to its unknown status within the project area. Except for this site and site AB1101-1B, the B. B. Hutchison farm complex is not threatened by the Richard B. Russell Project, and was therefore not recorded. This structure is an excellent example of the survival of log construction in this area during the nineteenth century. The use of V - notch joinery indicates a late nineteenth century date. The small size, two story height of the structure and its overhanging roof are unusual architectural features in the project area. The barn is well preserved, but is deteriorating rapidly and threatened with collapse.

.

Significance
This structure was recorded due to its unknown status within the project area. Except for this site and site
AB-1101-1-A, the B. B. Hutchison farm complex is not threatened by the Richard B. Russell Project, and was,
therefore, not recorded. The building is a typical example of a tenant farmer or hired man's dwelling within
the project area and the Southeastern United States, unusual in the project are for its definite association
with a farm complex. The method of chimney construction, with the main stack laid of fieldstone granite
narrowing to a brick chimney head, is unique within the project area among standing structures.

# 11. (continued)

on the private road 0.6 mile to a private drive, then south 0.2 mile on the private drive to the site.

25 PHOTOS AND SKETCH MAP OF LOCATION

Significance

This structure is typical of late nineteenth and early twentieth century houses in this region, although there are relatively few like it in the project area. Due to the salvage of much original fabric, there appears to be little potential for preservation.
